

Customer Data Retention and Deletion Policy

Owner: Security. Internal. Supports our SOC 2 Type II and GDPR commitments.

Retention periods

- **Payroll and tax records:** 7 years after the end of the tax year, as required for employment tax records.
- **Employee bank details:** deleted 90 days after an employee is terminated and their final payment has cleared.
- **Support chat transcripts:** 2 years.
- **Application logs:** 13 months; logs never contain bank or tax identification numbers.
- **Backups:** encrypted, kept for 35 days, then destroyed.

Deletion requests

A customer administrator can request deletion of a former employee's personal data. Security completes the request within **30 days**, except for payroll and tax records under legal retention, which are restricted from use rather than deleted until the retention period ends.

Who may access customer data

Engineers access production customer data only through just-in-time access approved by a senior engineer, for a maximum of 4 hours, and every access is logged and reviewed weekly by Security.

Reporting an incident

Report a suspected data exposure to Security within 1 hour of discovery using the security channel or a ping to security. Do not try to investigate it yourself first.
